

HKKChain

Full-Strength Connecting Link

- Same Fatigue Strength as Chain
- Less Down Time

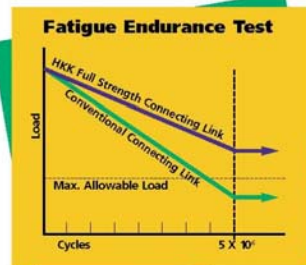

HKK's newly designed full strength connecting links are now standard. Size 35 through 240* connecting links have 20% higher fatigue strength than conventional connecting links. This added strength equals the fatigue strength of the chain allowing for maximum allowable loads.

Full Strength Connecting Link

Full-strength connecting links, cold forged solid bushings and solid rollers, specially treated pins and bushings, and many other features are standard on HKK Chain at no extra cost. Call for details and a catalog.

*Excluding size 41

Solid Bushing... Solid Roller... SOLID POWER
